Rasheed TV

A screensaver and home screen for Android TV,
in Arabic and English

The home screen: dates, weather, the clock, the card of the day, prayer times, countdowns, matches, and your favourite apps.

Step-by-step guide - version 0.2.4

What you get

The screensaver, after the TV has been idle for a while.

- **Clock** in your city's time, the **Islamic and Gregorian dates** (either on top, one only, or switching every 10 seconds), and the **weather**.
- **Next prayer** with a countdown; Jafari, Dubai, Umm al-Qura and other calculation methods; an optional **adhan**.
- **Countdowns** to Ramadan, the Prophet's birthday, Imam Ali's birthday and other occasions.
- Your **teams' matches**, and a card: verse and hadith of the day, morning and evening adhkar, sayings of Imam Ali, prayer times or the forecast.
- **Photos** from Wikimedia Commons by theme (UAE cities, cars, world nature, a favourite player), each with its caption and photographer.
- An optional **home screen** with your favourite apps, and a **settings panel** for everything, used with the remote.

Works on Android TV and Google TV, Android 7 or newer: Sony, TCL, Hisense, Philips, Xiaomi boxes, Chromecast with Google TV, operator boxes. **Not** on Samsung (Tizen) or LG (webOS) TVs.

Option A: install it from the TV (no computer)

About 5 minutes, with the TV remote only.

1. On the TV, open the **Google Play Store**, search for **Downloader** (by AFTVnews) and install it.
2. Allow it to install apps: **Settings** → **Apps** → **Security & restrictions** → **Unknown sources** → **Downloader: on**. On some TVs: **Settings** → **Privacy** → **Security** → **Install unknown apps**.
3. Open **Downloader**, select the address box, type the link below exactly, and press **Go**.
4. When the download ends, press **Install**, then **Done**. You can delete the downloaded file when Downloader offers.
5. Make it the screensaver: **Settings** → **Device Preferences (or System)** → **Screen saver** → **Rasheed TV screensaver**. Choose **When to start** there too (for example after 5 minutes).
6. Open the **Rasheed TV** app from your apps to choose your language, city and everything else (page 5).

The link to type in Downloader

```
https://github.com/archrasheedalani-lab/rasheed-tv/releases/latest/download/RasheedTV.apk
```

Tip: typing on the TV is slow; take your time, letters and the slashes must be exact. Capital letters matter in `RasheedTV.apk`.

The home screen (optional)

Some TVs ask which home screen to use the first time you press **Home** after installing: choose **Rasheed TV** and **Always**. Most Google TVs don't ask; then Option B (Claude) sets it for you in a minute, safely.

Option B: let Claude set it up for you

Claude, an AI assistant, does the whole setup from a computer on your Wi-Fi: it connects to the TV, installs the app, makes it the screensaver and, if you want, the home screen, and checks each step with a screenshot of your TV. It asks before changing anything and can undo it all later.

1. On the TV (once)

1. **Settings** → **System (or Device Preferences)** → **About**: press OK on **Build** 7 times, until it says you are a developer.
2. Back → **Developer options** → turn on **USB debugging** (and **Network debugging** if you see it).
3. Note the TV's **IP address**: **Settings** → **Network & Internet** → your Wi-Fi (it looks like 192.168.1.23).

2. On the computer

1. Install the **Claude desktop app** from **claude.ai/download** (Windows or Mac) and sign in.
2. Open the **Code** tab and choose a folder on this computer (for example a new folder on the Desktop). The computer must be on the **same Wi-Fi** as the TV.
3. Paste this one line and send it:

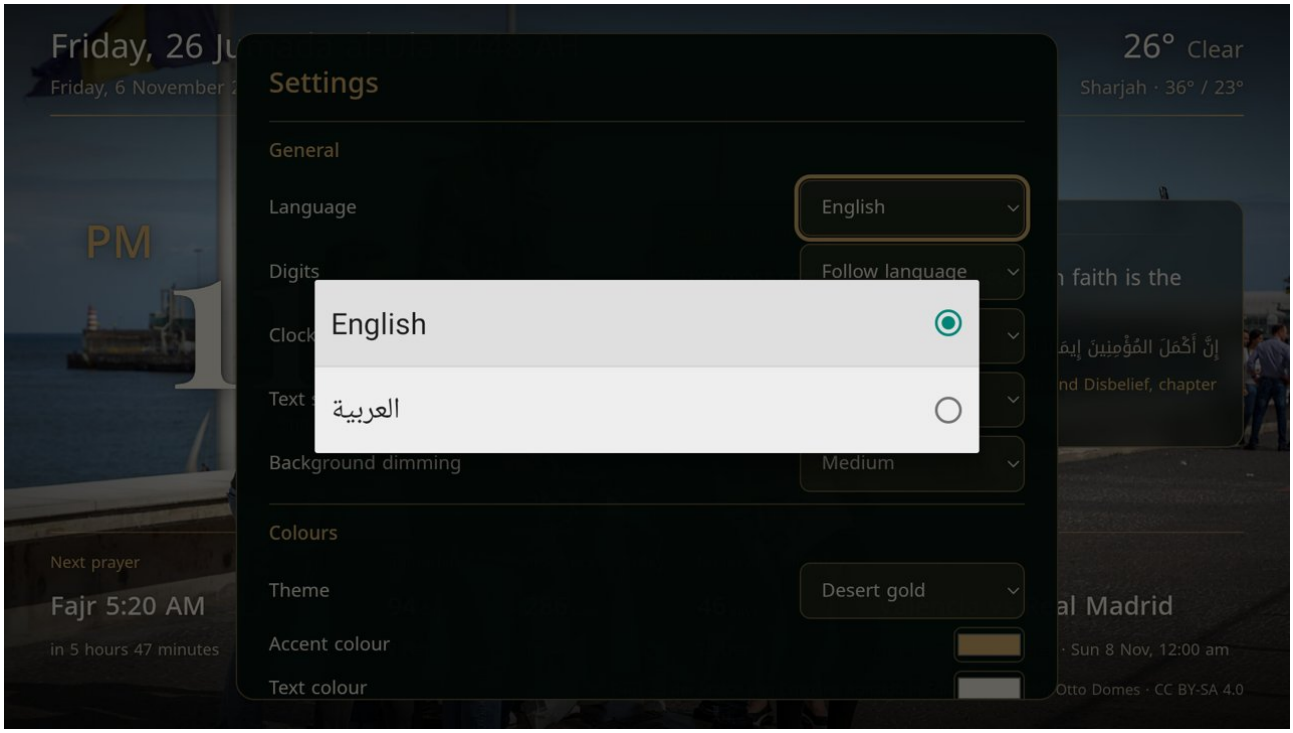

```
Set up my TV with Rasheed TV from https://github.com/archrasheedalani-lab/rasheed-tv: follow docs/SETUP-PROMPT.md step by step. You are on a computer on the same Wi-Fi as the TV.
```

4. Answer Claude's questions (the TV's IP address, and whether you want the home screen too).
5. When Claude says so, look at the TV: **Allow USB debugging?** appears. Press **Allow** and tick **Always allow from this computer**.
6. Claude installs and checks everything, then shows you what it did.

Why a computer? Claude must reach the TV over your Wi-Fi, so it has to run on a computer in your home: a chat in a web browser can't. The full instructions Claude follows are public, in `docs/SETUP-PROMPT.md` of the project.

Using it

Settings

The settings panel: arrows to move, OK to open a list or tick a box, Save at the bottom.

Open the **Rasheed TV** app (or, on the home screen, the **Settings** tile at the end of the row). You can change:

- **General:** language (English or Arabic), digits, 12/24-hour clock, text size, background dimming.
- **Colours:** six themes, and your own accent, text and card colours.
- **City and time zone:** pick a city or search any city in the world; the time zone follows it.
- **Prayer and date:** calculation method, Islamic or Gregorian date on top, Hijri date offset.
- **On screen:** turn each part on or off. **Card**, **countdowns**, **teams**, **photo themes**, **adhan**.

Press **Save** at the bottom. **Back** closes the panel without saving.

The home screen and your favourites

Arranging favourites: the app you picked up lifts; move it with the arrows.

- **Left / right** moves along the row; **OK** opens the app.
- **All apps** (second-last tile) shows every app. Its first tile, **Choose favourites**: press OK on an app to add it to the row or remove it (marked ★).
- **Hold OK** on an app in the row to move it: left/right carries it, OK puts it down, then **Done** (or Back).
- Your TV's own home screen stays installed; Claude (or the steps on the next page) can switch back.

The adhan. The shared app has no adhan recording: recordings belong to whoever made them. To hear the adhan, build the app yourself with your own recording (the project's README, "Build it and install it from your computer"), or ask Claude to help you do it.

Removing it

Everything can be undone; your other apps and accounts are never touched.

- **Only the screensaver:** Settings → Device Preferences → Screen saver → choose another one.
- **Everything, with Claude:** on the same computer, tell Claude *"Remove Rasheed TV from my TV, following docs/SETUP-PROMPT.md step 9"*. It puts your old home screen and screensaver back first, then removes the app.
- **Without a computer**, if Rasheed TV is **not** your home screen: Settings → Apps → Rasheed TV → Uninstall. (If it is your home screen, use Claude, so the TV never has no home.)

Privacy

After the setup you may turn **USB debugging** and **Network debugging** off on the TV (Developer options). The screen keeps updating without them; only changes made from a computer need them on again. The app stores your settings on the TV only.

About the texts

Hadith and adhkar come only from al-Kafi, Man La Yahduruhu al-Faqih, Tahdhib al-Ahkam and al-Istibsar; the sayings of Imam Ali from Nahj al-Balagha. Each carries its reference and is marked *not yet checked* against the printed books: corrections are very welcome on the project page.
